

Logical ERD for Project Enhancement Database

Benjie Friedman
2022-01-14

Keeps track of personnel (employed by both Luniko Consulting and their clients) and enhancement requests, including those requests' identifiers and owners. This logical model is supplemented with a data dictionary and a document entitled "Extended Assumptions & Constraints." Additionally, this model is to be implemented in **MySQL** as a **relational database** using **tables** as data structures.
